Allowance

1. Claims 1 through 13 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, Schneider et al, U.S. Patent No. 4,963,872 (hereinafter Schneider) teaches a circuit arrangement (see Figure 1) for converting a preferably analog input signal from at least a receiver into a digital output signal, said circuit arrangement comprising the claimed threshold value circuit (17), first input (17a), second input (17b), reference threshold signal detector (21), output (12), detector circuit (27), control circuit (28+24) and capacitive element (23).

Although Schneider discloses a resistor (25) wherein the capacitive element is arranged subsequent to the resistor, Schneider fails to indicate the resistor is a **variable resistor**. While it may be obvious to one of ordinary skill in the art to replace Schneider's resistor with a variable resistor, this modification would fail to teach the claimed limitation of assuming a high-ohmic state preventing a discharge of the capacitive element during the time intervals that are assignable to the overshoots and/or pauses and/or interruptions, and a low-

ohmic state during the intervals that are not assignable to the overshoots and/or pauses and/or interruptions.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
